#### **DETAILED ACTION**

### **Drawings**

1. Figures 1a, 1b and 2 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

### Specification

2. The abstract of the disclosure is objected to because the numerals 40 and 42 are interchangeably used for the engaging projection and the lever arm. Correction is required. See MPEP § 608.01(b).

## Claim Rejections - 35 USC § 112

- 3. The following is a quotation of the second paragraph of 35 U.S.C. 112:
  The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 4. Claims 8-12 and 15-16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
  - Independent claims 8 and 12 recite "a system chassis or circuit board back plane" in line 1. The use of "or" makes it indefinite because it is not clear, which one is being claimed. A back plane could be very different from a chassis.
  - Independent claim 15 recites the limitation "said back plane" in line 2. There is insufficient antecedent basis for this limitation in the claim.

## Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- 6. Claims 1-16 are rejected under 35 U.S.C. 102(a) as being anticipated by Hashimoto.

Hashimoto (Figures 1.-11) shows an ejector mechanism having a spring 90 made from a resilient deformable material as an engaging projection and a lever (called cam) 70 pivotally mounted on a back plane (card receiving section) 31 of housing 30 wherein the cam is operated by a sliding lever 50, thus making spring 90 springably engaged to lever 50. Cam 70 has two rigid arms wherein one arm (called card engaging section) 71 engages a card (circuit board) on which a connector 10 is mounted to engage/disengage connector 10 from connector 17 mounted on the back plane. Cam 70 is slidably mounted in space 38 on the back plane. Spring 90 provides the flexible coupling allowing relative movement of the card from the back plane and a biasing force to the card towards the back plane.
